

Distribution of work

Alexander Makejkin

- Application of WCA on filtered class-level *.rsf file, and exploring the ARCADE tool parameters
- Extracting information from class-level clusters generated by the algorithms
- Gathering metrics (a2a, cvg) for all class-level cluster algorithm pairs (pre-ARC)
- Creation of structural similarity matrix to prepare for ARC and reduction to file-level scope
- Report work on RQ1 in all chapters

Louis Husemann

- Compiled the project which ended up being finding a solution to make the provided Java-Parser work on the project-JAR, as the current version doesn't work with it.
- Creation of filtered class-level *.rsf file for Week 1
- Creation of file-based *.rsf file based of the class-level .rsf from Week 1
- Creation of clusters with ARC-Clustering from structural similarity and semantic similarity matrices
- Application of running hierarchical summarization on the HPC.
- All of the "Study Design"-section in the report for RQ2
- All of the "Results"-section in the report for RQ2
- All of the "Discussion"-section in the report for RQ2
- All of the "Conclusion and Future Work"-section in the report for RQ2
- Generation of extra zero-shot results for all clustering algorithms as asked in the mail from the 2th of June
- Reformatting of LLM-Output-Results as asked in the announcement on 2th of June

Mikhail Kiselev

- Application of LIMBO on filtered class-level *.rsf file, and exploring the ARCADE tool parameters
- Creation of Semantic similarity matrix for Week 3
- Report work on RQ1 in some chapters
- Preparation of the presentation
- Presented presentation

Mohammed Danish Shaikh

- Report work on RQ1 in some chapters
- Preparation of the presentation
- Presented presentation

Christopher Seibel

Dropped out of this course.
